

Publisher's note

We are delighted to be able to inform you about an important development for the benefit of authors and readers of *Cognitive Science*.

Cognitive Science has been selected for inclusion in a pilot programme for a new 'Colourful e-Products' workflow. The first issue of the journal to appear following this new workflow is volume 27, issue 2. This issue contains a number of colour and black & white illustrations. Some of the figures that appear in black & white in the printed version of this issue of the journal are IN COLOUR, online, in ScienceDirect.

This 'colourful e-products' solution provides a welcome step forward now that scientists increasingly access information on line. Scientists in many disciplines need to be able to publish their work in colour, but the cost of colour printing in small, specialised journals can be prohibitive and we realise that not all scientists have appropriate funds to cover the charges.

Authors wishing to make use of this facility should ensure that 1. the artwork is in an acceptable format (TIFF, EPS or MS Office files) and at the correct resolution 2. RGB colourspace is used and 3. for colour online and black & white in print, both colour and black & white artwork (file and/or hardcopy) is provided.

There is no extra charge for authors who participate in this new facility. Further information on electronic artwork can be found at <http://authors.elsevier.com/artwork>. In situations where figures make essential use of color, the journal now also has the capacity to publish a limited number of color figures in the hard copy version of the journal. In these cases, a portion of the additional costs incurred will be the author's responsibility.

To view the articles online please access the journal from the ScienceDirect website: <http://www.sciencedirect.com>. Members of the Cognitive Science Society can access the online journal via the society website <http://www.cognitivesciencesociety.org/>

Your feedback and comments are welcome.
